Remove the burden of managing SIMS in school

**Introducing Scomis SIMS Hosted Application Service.
A partnership between Herts for Learning and Scomis, that removes the burden of managing SIMS onsite with school based servers.**

The Hosted Application Service is designed to support schools and academies by reducing the time and money it takes to maintain and keep Management Information Systems up to date. The service ensures that upgrades, patching, backups or software updates are completed remotely with no disruption to the busy school day. In addition, data can be accessed securely from anywhere with an internet connection, providing flexibility to access.

Scomis are a specialist SIMS support provider with 16 years' experience hosting SIMS for hundreds of schools across the UK. They have invested in a programme of continual improvement to ensure that they understand and respond to the changing needs of the education sector and the performance of the service is maximised, ensuring the service has been designed to meet educational requirements.

The new service is fully supported by Herts for Learning ICT Service Desk in the same way as locally hosted SIMS, including remote support to quickly access your desktop and work with you to resolve any queries that may occur.

Hosted SIMS - an alternative to replacing hardware

The Hosted Application Service is an alternative to replacing hardware for SIMS

The key features of hosting are:

- **superior user experience**
  - from simple and seamless access to data through to password resets and remote support, providing the very best user experience

- **hassle free upgrades and offsite backup**
  - all upgrades, patches and backups are automated ensuring everyone gets the most out of SIMS

- **trouble free third party application Integration with SIMS**
  - third party applications are managed and maintained within the service, saving time and money

- **seamless, secure and flexible access**
  - allowing access to SIMS at any time, using a range of devices - whether in school, at home or anywhere with an internet connection

- **no hidden costs including unlimited user provisioning**
  - all features of the service are included as standard and all staff can be set up as users at no additional cost

"With ever decreasing budgets schools are having to find innovative ways to keep their IT resources current but at low costs. Chromebooks have given schools a life-line.

SCOMIS Hosted SIMS has enabled staff to access records using their Chromebooks. This has revolutionised the way staff work. As we all know teaching is not a 9-5 job. Having access to records remotely (GDPR compliant) has helped with workloads. We are more than happy with the service and would recommend to other schools."

Cetta Guglielmo
School Business Manager
Morgans School
